

1. On mobile, the hamburger menu was not at the right as expected. It was under my name (**Before** on the left and **after** on the right). I fixed the alignment to move it to the right corner.

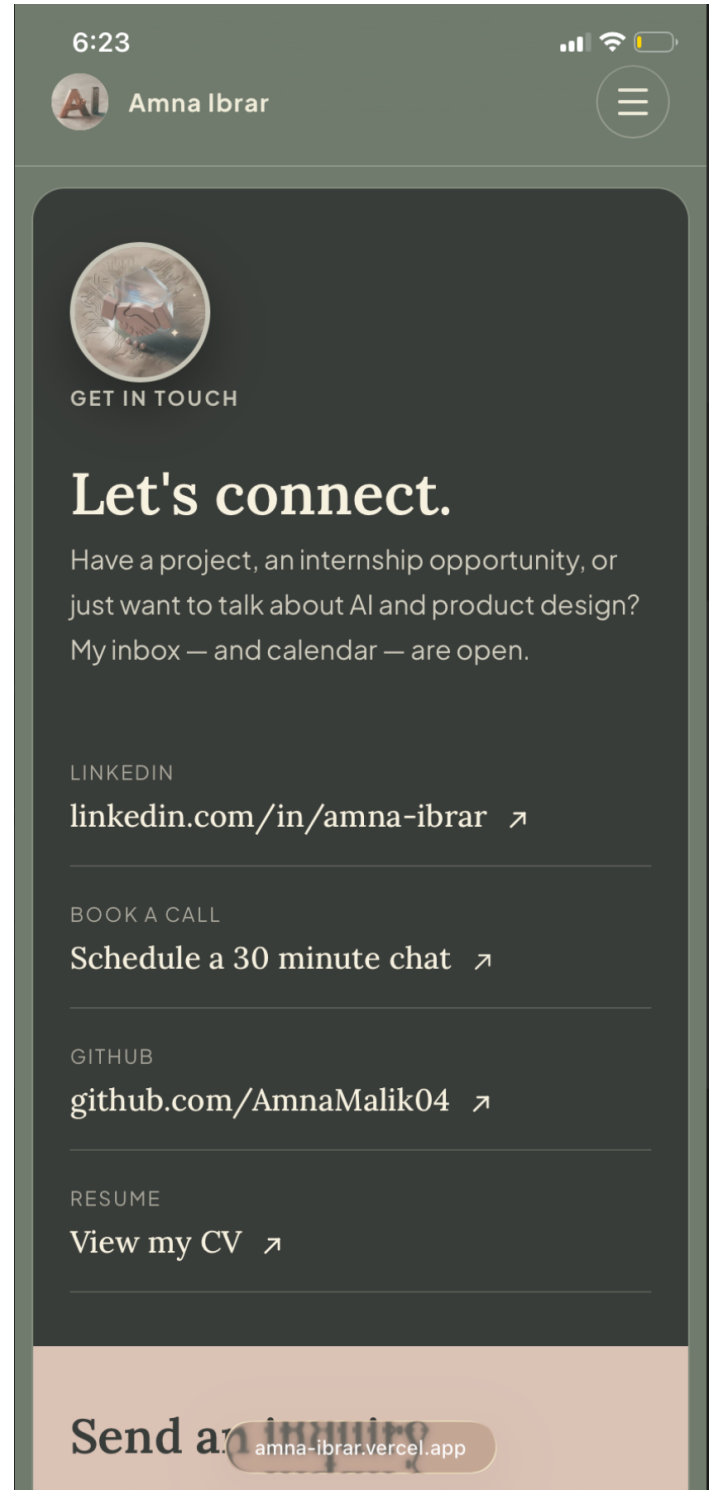

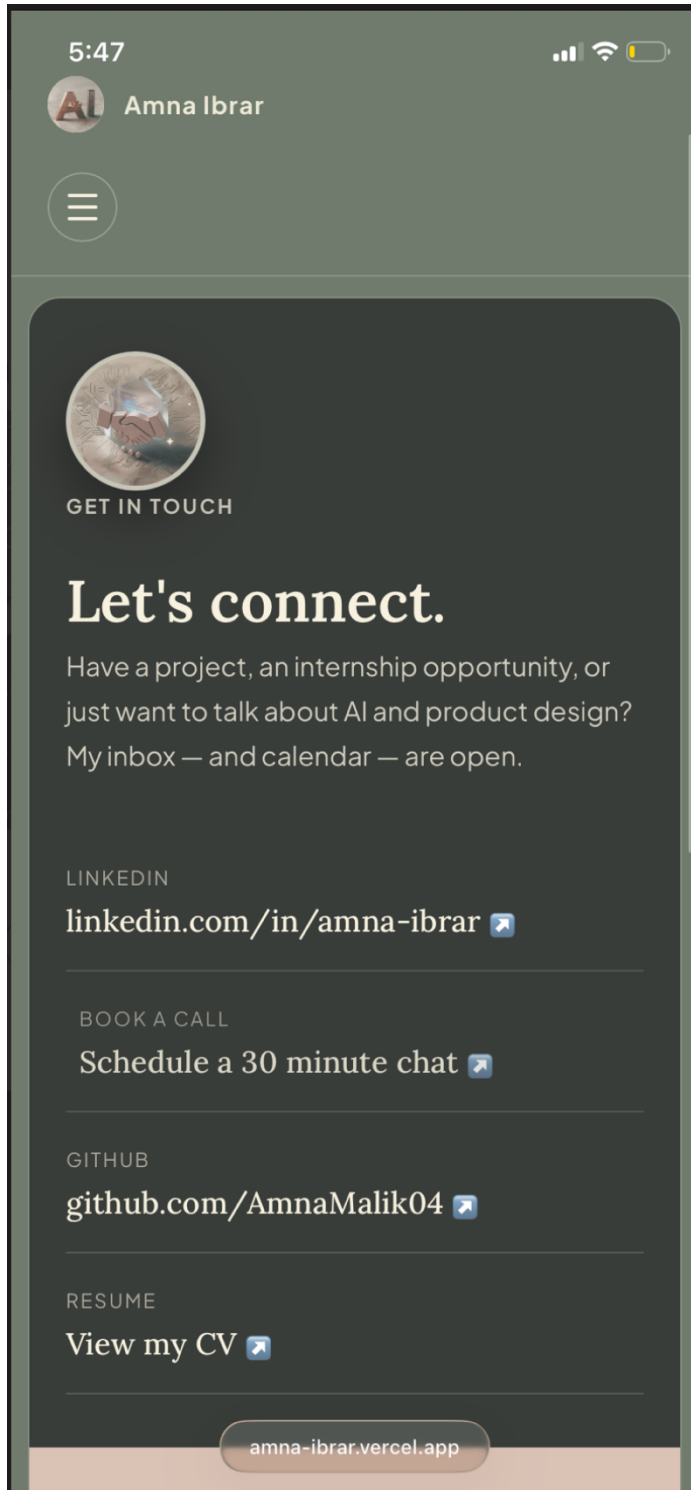

2. The arrows on the right of the image on the *Works* page (**Before** on the left and **after** on the right). The arrows were moved under the image and swipe functionality added as well.

3. The arrows lay on the images, disrupting user experience (**Before** on the left and **after** on the right). The arrows are then removed and a swipe functionality added.

4. Phone emoji icons are displayed instead of the custom arrows used (**Before** on the left and **after** on the right). The CSS is redefined to use svg images.

5. In the Ipad's portrait mode, the images are again at the right of the images, and the content underneath was left aligned (the first image is **Before** the second image is **after**). The text is center aligned and the arrows are moved under the images.

MOBILE APPLICATION

# Bridge

Multimodal Communication for Accessible Learning

*An accessibility-focused mobile application designed to help children with speech and hearing difficulties communicate more easily through voice, text, sign language, images, and interactive storytelling.*

The project explores how multimodal interfaces and AI can make communication and learning more accessible
