

Workflow Audit:

<i>Task</i>	<i>Classification (just me, delegate to AI with review, collaborate with AI, fully automate)</i>	<i>Rationale</i>
Do FlyRank AI's internship assignments	Collaborate with AI.	AI helps me research, brainstorm ideas, and improve my work, while I remain responsible for understanding and completing the assignments.
Develop the AI chatbot project.	Collaborate with AI.	AI assists with code generation, debugging, code review, and optimization, while I design, implement, test, and validate the required functionality.
Search for relevant research papers using Google Scholar for my planned research paper.	Collaborate with AI.	AI can suggest search strategies, summarize abstracts, and identify relevant papers, but I decide which sources are credible and suitable.
Write the literature review for selected papers.	Delegate to AI with review.	AI can help organize and draft the literature review, but I must verify accuracy, rewrite where needed, and ensure proper academic writing.
Use Mendeley to organize references and bibliographic information.	Fully automate.	Mendeley can automatically import and organize bibliographic information, reducing manual data entry and formatting effort.
Review my brother's SAT practice papers and track his progress.	Delegate to AI with review.	AI can compare answers against the marking scheme and identify errors, but I review the feedback before explaining mistakes.
Create posts for LinkedIn to build an online presence.	Collaborate with AI.	AI can improve clarity, grammar, and structure, while I ensure the content reflects my own experiences and voice.

Teach my math tuition classes.	Just me.	Teaching requires personal interaction, adapting explanations to each student's needs, and answering questions in real time.
Complete Anthropic Academy courses.	Just me.	I need to complete the learning myself to understand the concepts and apply them effectively in future work.
Test the AI chatbot.	Collaborate with AI.	AI can generate test cases and identify potential issues, but I validate the chatbot's responses and overall user experience.
Practice new programming concepts.	Just me.	AI can explain concepts, but mastering them requires my own practice and problem-solving.
Write technical documentation for projects.	Delegate to AI with review.	AI can draft documentation and improve readability, but I verify the technical accuracy before publishing.

Three Audit Tasks:

1. Develop the AI chatbot project. *Done well means that chatbot correctly implements Retrieval-Augmented Generation (RAG) to answer university-related student queries using relevant university information, provides accurate responses for common student queries, and maintains an average response time suitable for real-time interaction.*
2. Write the literature review for selected research papers. *Done well means that all selected research papers are read and critically evaluated using a consistent evaluation rubric, with accurate summaries, properly cited references, and clear identification of research gaps relevant to my study.*
3. Test the AI chatbot. *Done well means that the chatbot is tested using LiveKit Rooms across multiple user scenarios, all major features function correctly, response accuracy and latency are evaluated, and any identified issues are documented and resolved before deployment.*

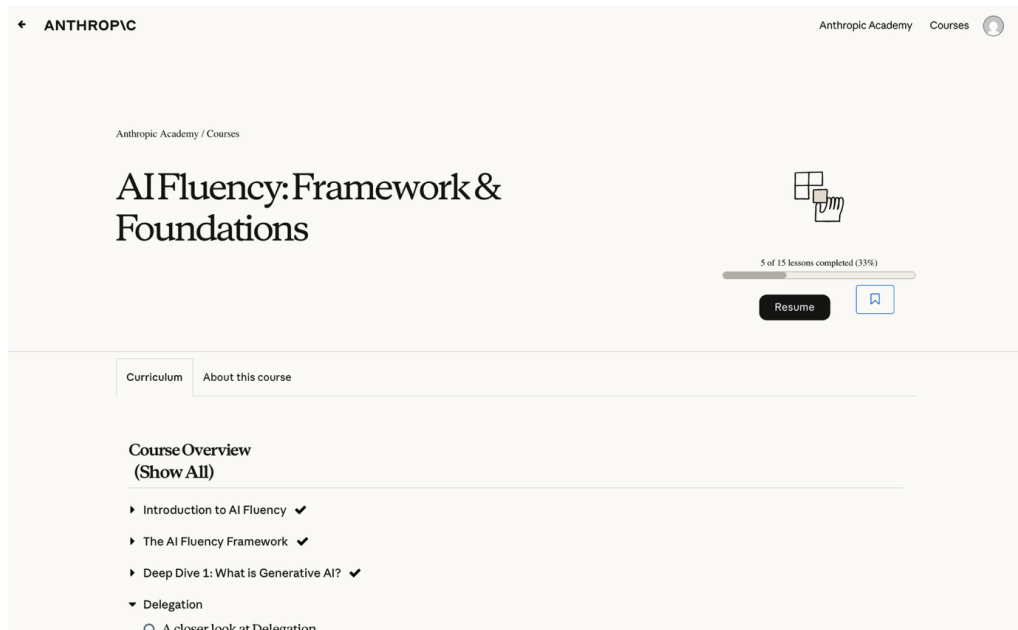

Course Progress:

Course: AI Fluency: Framework & Foundations

Platform: Anthropic Academy

Status: Module 1 Completed
